

**How
to
Install
Thin
Bricks**

👉 What You Will Need 👈

[Click here to see how we casted them](#)

Concrete Thin Bricks

Type S Mortar

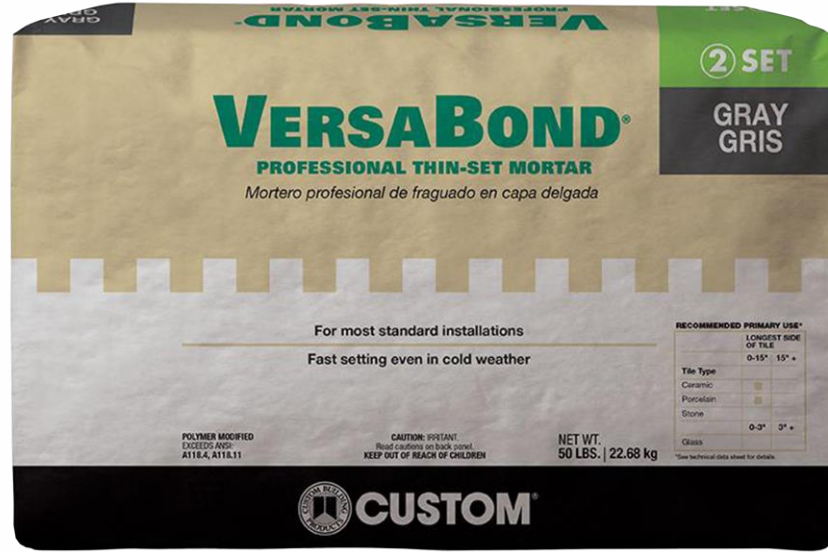

Grout Bag

Large Brush

OR

OR

**100%
Silicone**

(Indoors)

Thin Set Mortar

(Indoors & Outdoors)

**Construction
Adhesive**

(Indoors & Outdoors)

OR

**Brick
Jointer**

Trowel

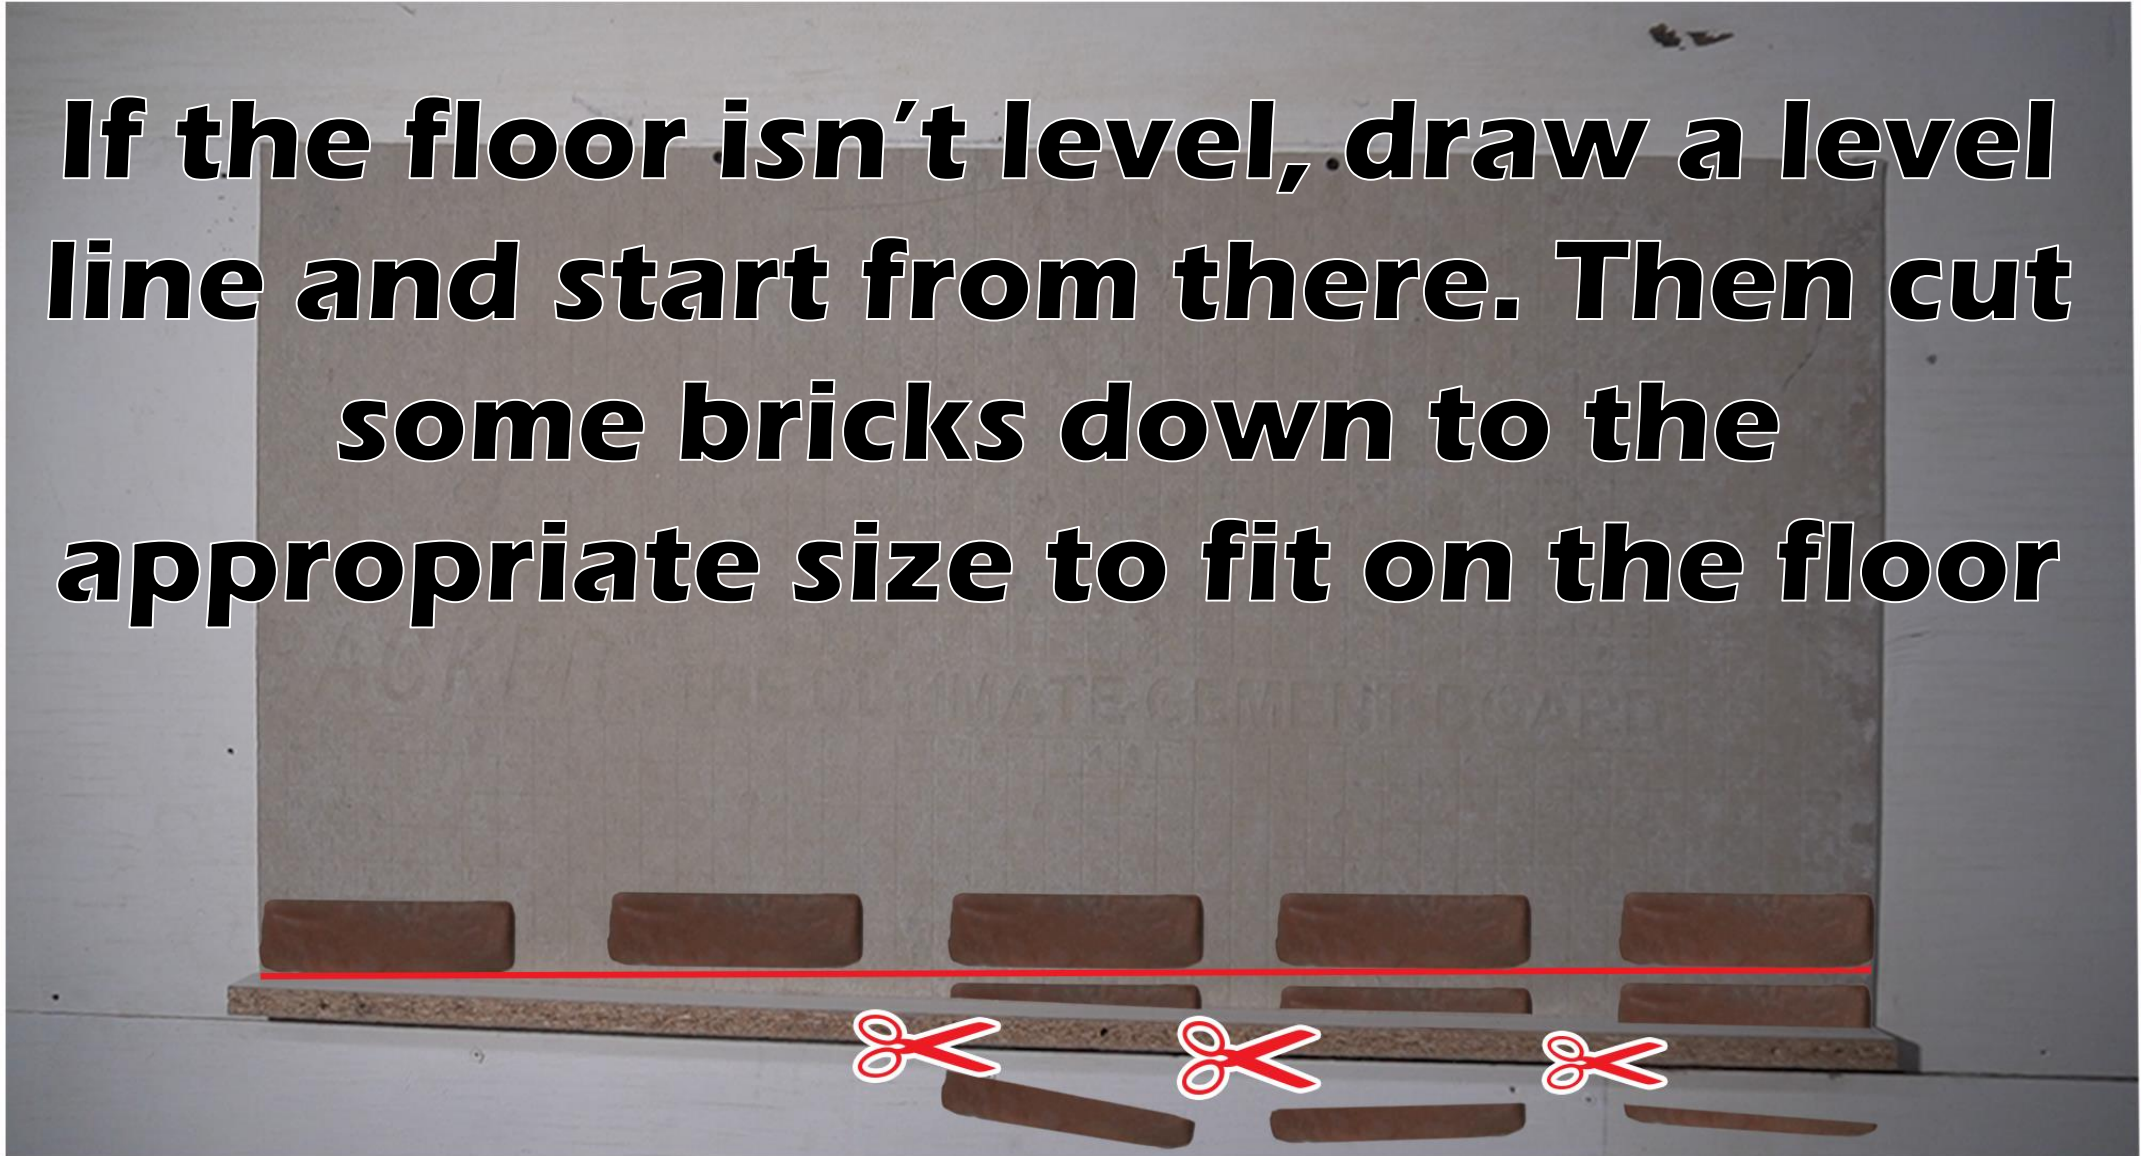

**You start on
the floor in the
very corner**

Warning

**The floor must be
level!!!!**

If the floor isn't level, draw a level line and start from there. Then cut some bricks down to the appropriate size to fit on the floor

**I'm using 100%
silicon to adhere
the bricks to the
wall because I am
working indoors**

**Construction adhesive
works great indoors
and outdoors!**

Another option is using thin Set Mortar Mix applied to a wall with a square notch trowel. This can be used indoors & outdoors

2

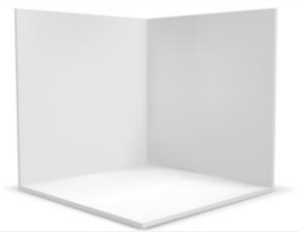

Use spacers to get the right distance between each bricks made mine 0.5 inches out of melamine. (I don't recommend making them any thicker though)

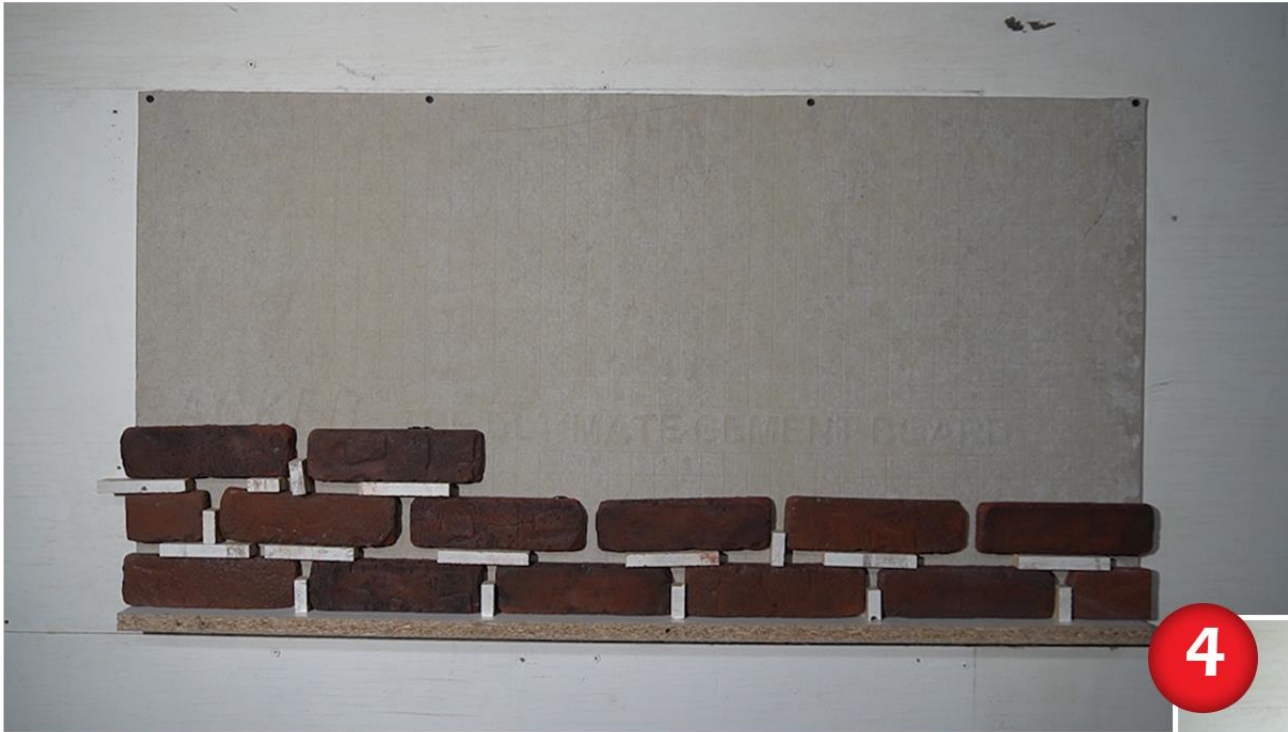

3

**Cut bricks to
fit onto
inward
corners**

**Or use our
corner
bricks for
outward
corners**

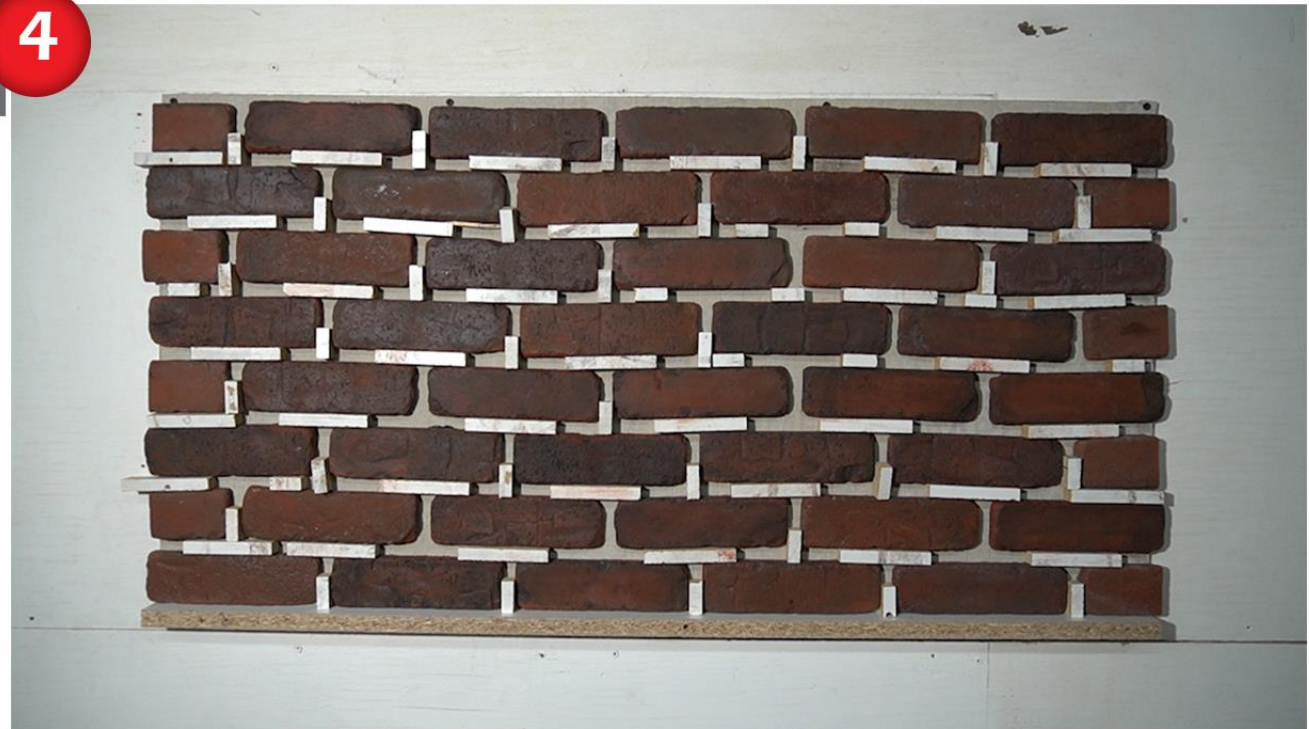

Keep applying the bricks

4

❖ PRO TIP ❖

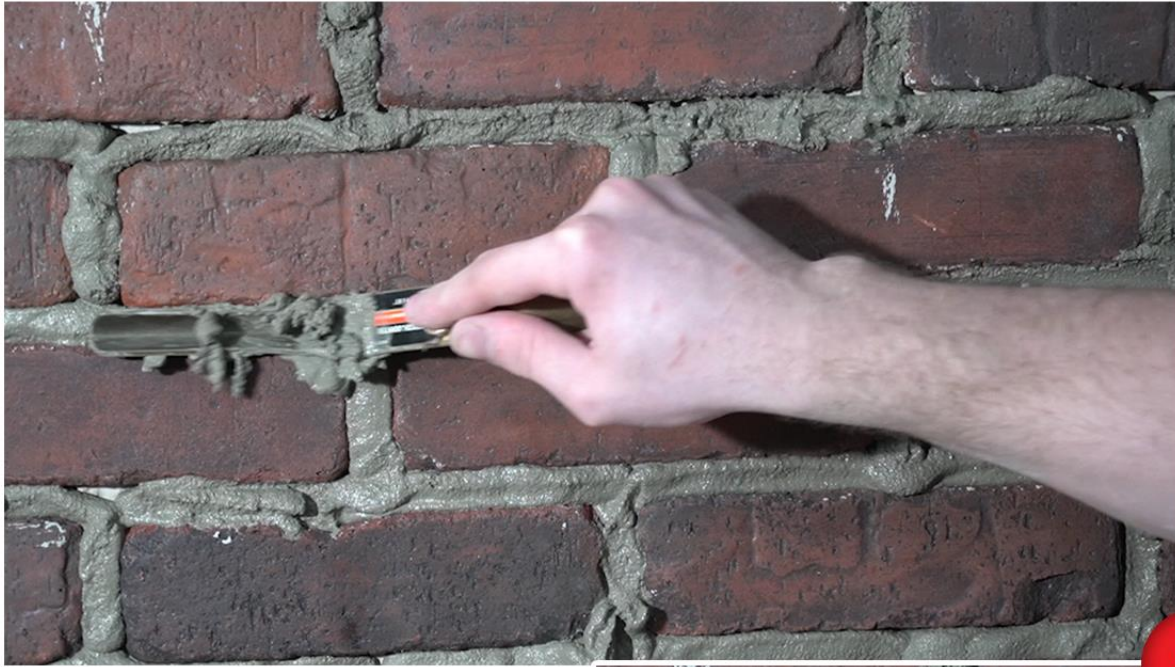

Use much longer horizontal spacers to make the lines between the bricks straighter. Use short ones like me for a more grunge look

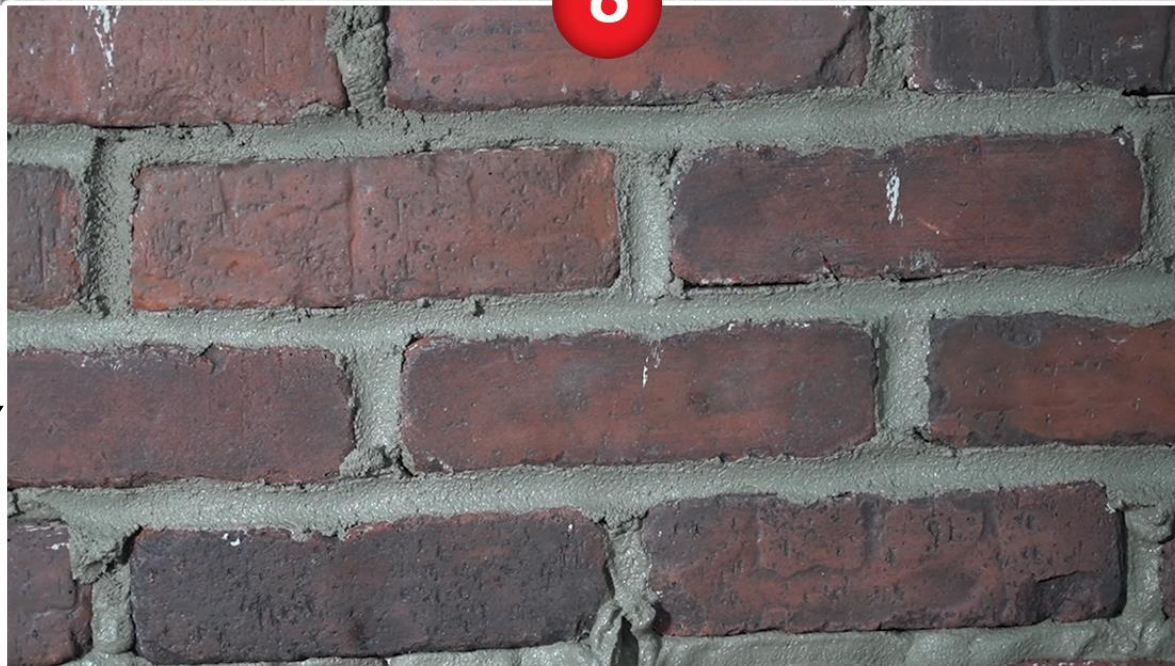

Use a grout bag to lay grout between each brick once the adhesive has dried

6

Once nothing is left on your finger after you touch the mortar, you are ready to texture it

Either scrape the mortar off with a trowel, or use a brick jointer like me

7

**Use a large brush to
smooth out the
sharp edges**

**Wait for the
mortar to cure,
and you're
finished!!**

PRO TIP

**Use a washer light above
the bricks and add
character to your wall
with shadows and lighting**
